Instructions on how to add an image to your background for your computer desktop wallpaper

Windows Users

You will find this very easy once you've done it….

First, click on the link to the wallpaper image of your choice. This will open the image on a separate browser page.

Once you are on the page that you like for your wallpaper or background graphic for the desktop RIGHT MOUSE CLICK on the image. (Make sure it has finished completely loading. Remember, these are large images)

Choose "SET AS BACKGROUND" from the menu that appears from your mouse clicking.

That's it! Repeat as often as you'd like!

Mac Users (For MAC O/S 8.0 and higher)

Find an image, you can pull one of a search engine, or an email, or a photo from your camera.

Save the image to your hard disk. You can do this by dragging it to your desktop in many cases.

Open preferences on your mac and go to "Desktop & Screen Saver".

Press the + button in the lower left. Select the image on your hard drive.
